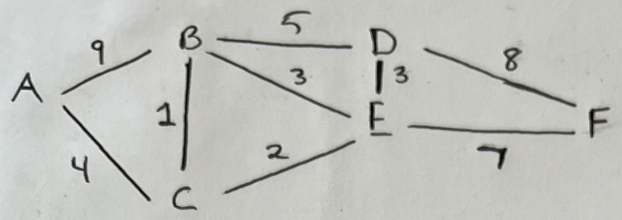
5)

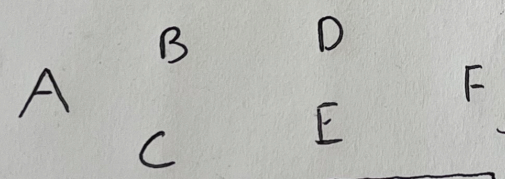
Graph Model 1



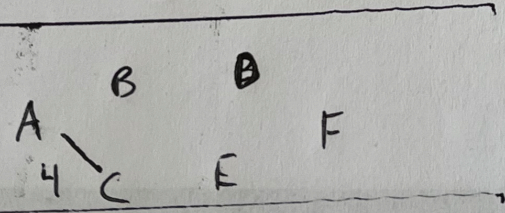
A computer represents a vertex, and a cable represents an edge.

B. We can use Prim's algorithm to create a mapping of the current graph that will connect all computers, not necessarily directly, at a minimum cost. Prim's algorithm proceeds by taking the most promising, successive action, and building a minimum spanning tree

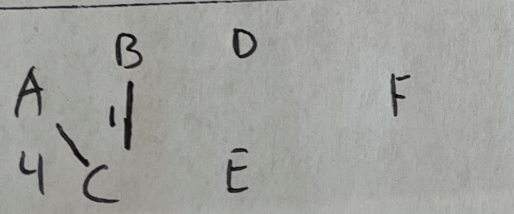
C. 1)



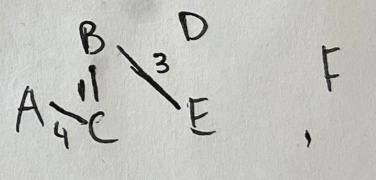
2)



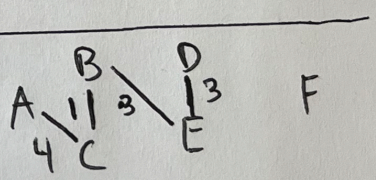
3)

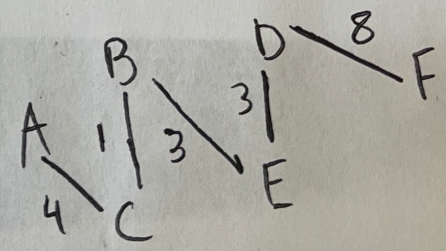


4)



5)





6)
